

Your Pool Gobbler Pro is quick and easy to install

The components are:

- A. Skimmer Head
- B. Filter Locking Ring
- C. Filter Sock
- D. Hose Assembly
- E. "L" Connector with "U" Clip & Pressure Adjustment Ring
- F. Screw on Aimflow Connectors (region specific)
- G. Nozzle

To assemble:

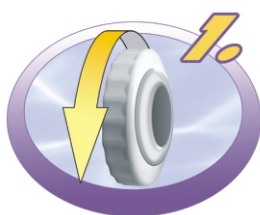

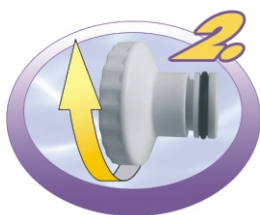

1. Connect skimmer head **A** to nozzle **G** & hose assembly **D**
2. Attach "L" connector to other side of hose assembly **D**
3. Work open end of filter sock **C** over filter locking ring **B**
4. Leading with filter bag insert into skimmer head **A** and press firmly to secure.

YOUR POOL GOBBLER PRO IS READY TO INSTALL

To install:

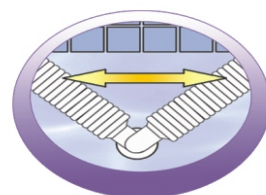

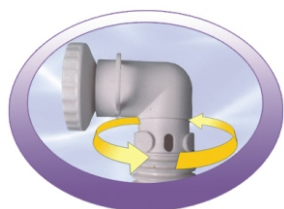

Before installing the POOL GOBBLER PRO, locate the aimflow in your pool. This is where the water from the pump and filter returns to your pool. It is advisable to turn off the pump whilst installing.

1. Remove the aimflow fitting, unscrewing the ring fastener, remove the directional ball fitted inside.
2. Select the aimflow screw-on connector to suit the size of your fitting and screw on.
3. Attach the POOL GOBBLER PRO unit to this fitting with the "L" connector and secure using the "U" clip.

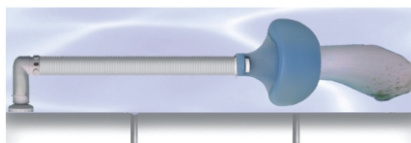

To adjust:

The POOL GOBBLER PRO can be fitted to point clockwise or anticlockwise depending on the positioning in your pool. After fitting the POOL GOBBLER PRO can be rotated to face in the opposite direction simply by rotating the "L" connector to the reverse position and twisting the skimmer head on the hose. The venturi effect can be adjusted for optimum effect by rotating the "L" connector up or down to adjust the skimmer head depth in the water.

In pools with multiple water inlets it might be necessary to close off the other inflow to get better pressure. We recommend that in most situations the pressure adjustment ring be left open to aid circulation, the hole should be opened to face downwards. In low pressures the hole should be adjusted closed.

POOL GOBBLER PRO will position itself neatly against the side-wall of your pool.

NOTE: The selection of aimflow connectors supplied specifically for your country will fit the majority of pools installed in the last 20 years. In the unlikely event that the connector supplied does not fit your pool, a range of fittings, including specific fittings for the Intex Easy Set Range of above-ground pools, and an adaptor for pools with no fitting, only an open pipe. These are available from your dealer.
